**CONNECT ANYWHERE** – Starlink is the world's first Low Earth Orbit (LEO) Satellite internet service that can meet your business anywhere in the world. Starlink provides highly resilient, truly global coverage.

**RESILIENT TO WEATHER** – Designed to endure the elements, Starlink can withstand extreme cold, heat, snow, heavy rain, and gale-force winds. Starlink also holds up against rocket engines generating 190,000 lbs. of force.

**IMPROVED SITE AVAILABILITY** – Fixed site's primary/backup connectivity often shares a single point of failure on providers' upstream networks. Starlink offers a truly diverse internet connection that can withstand even the most severe terrestrial network failure.

**SIMPLE GLOBAL PROCUREMENT** – Reduce your Operational Expenses by simplifying your internet procurement process and unlock the economies of scale of your business's global footprint.

**SUPPORT NEW SITE CONSTRUCTION** – No need to wait for in-ground infrastructure to be available at your new site – deploy a Starlink kit in less than 5 minutes to quickly deliver high speed internet to your crew. If your site has higher throughput needs, transition your Starlink connection to your site's backup once Fiber arrives.
